

Fitting Instructions

for Bottom Rolling External Doors with Non Mortice Hinges

Diagram 1

SYSTEM CAPACITY

Maximum leaf height = 3000mm
Maximum leaf width = 1000mm
Maximum leaf weight = 80kg each
Maximum leaf thickness = 68mm**
Minimum leaf thickness = 56mm**

On systems using door leaves that are narrow and thick and the hypotenuse is more than the door width x 1.004 then a risk of camming exists (see diagram 12).

**For thicker or thinner doors please contact PC Henderson Technical Department
technical@pchenderson.com

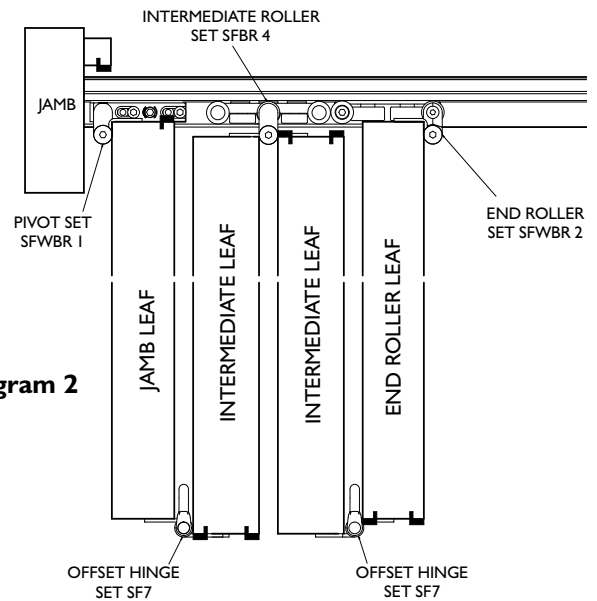

Diagram 3

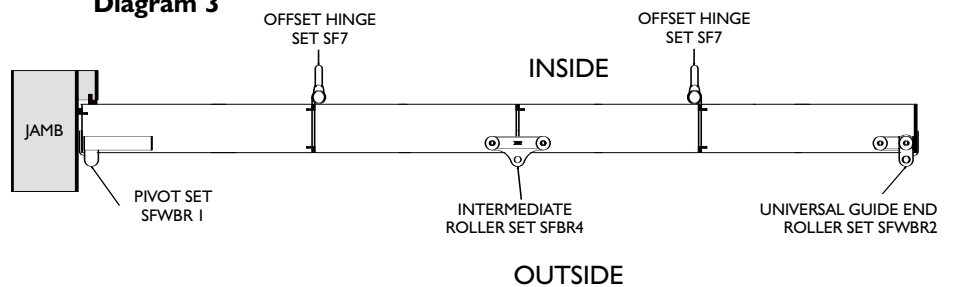

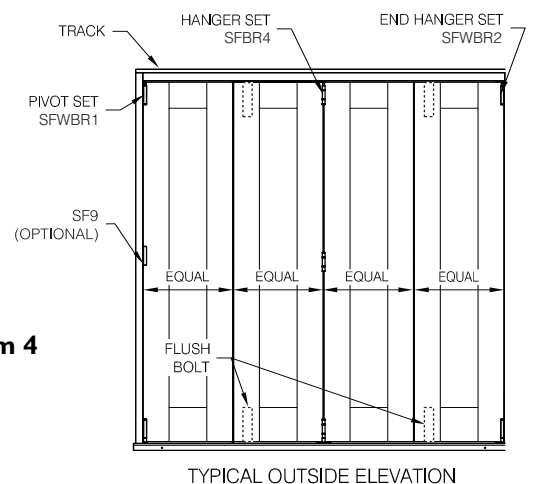

Diagram 4

PREPARATION

- SFWBR1 - Pivot Assembly Set
- SFWBR2 - End Hanger Set (Universal)
- SF3 - Hinge Set with Handle
- SFBR4 - Intermediate Hanger Set
- SF7 - Hinge Set Offset Outward Opening
- SFWBR 8 - Rebated End hanger Meeting Doors
- SF9 - Pivot Hinge for Doors Over 2200mm High (Optional)
- SF10 - Face Fix Handle

Diagram 5

Typical 4 leaf configuration
- Standard mortise shown

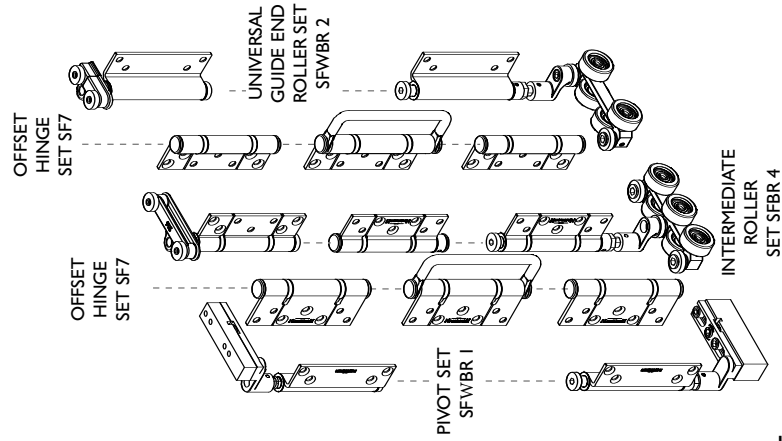

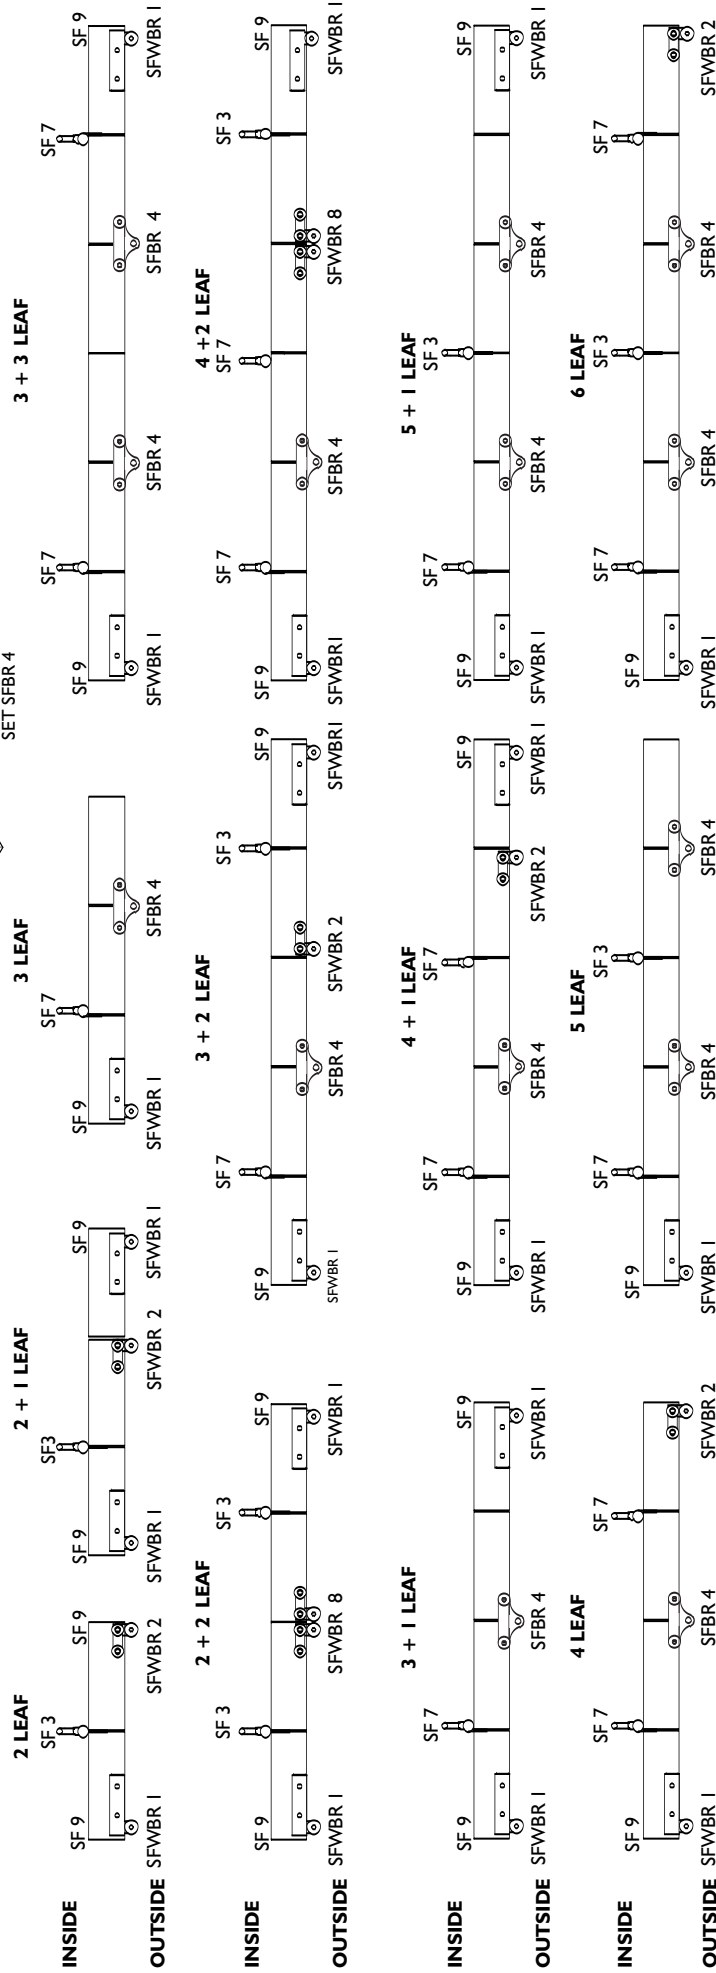

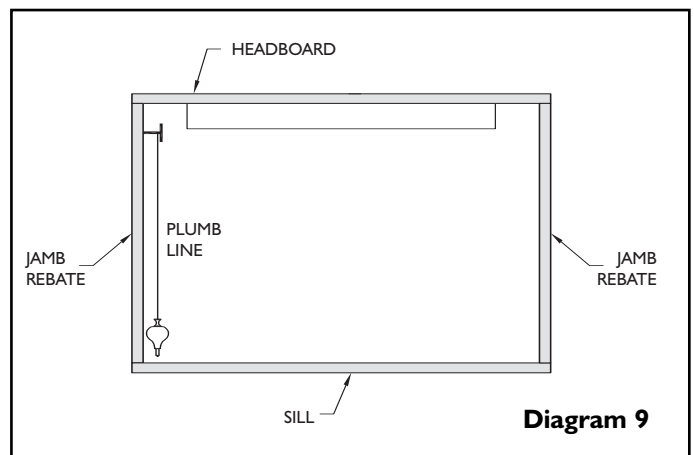

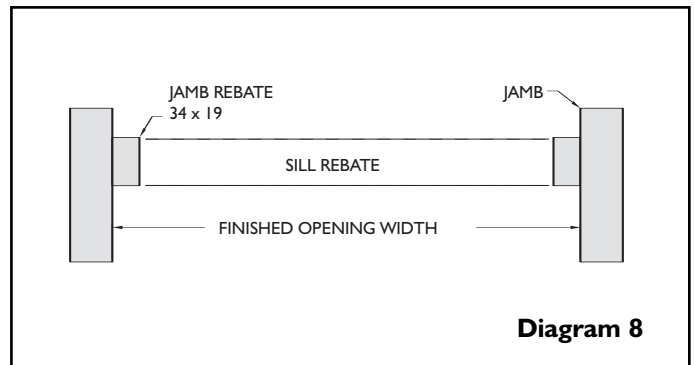

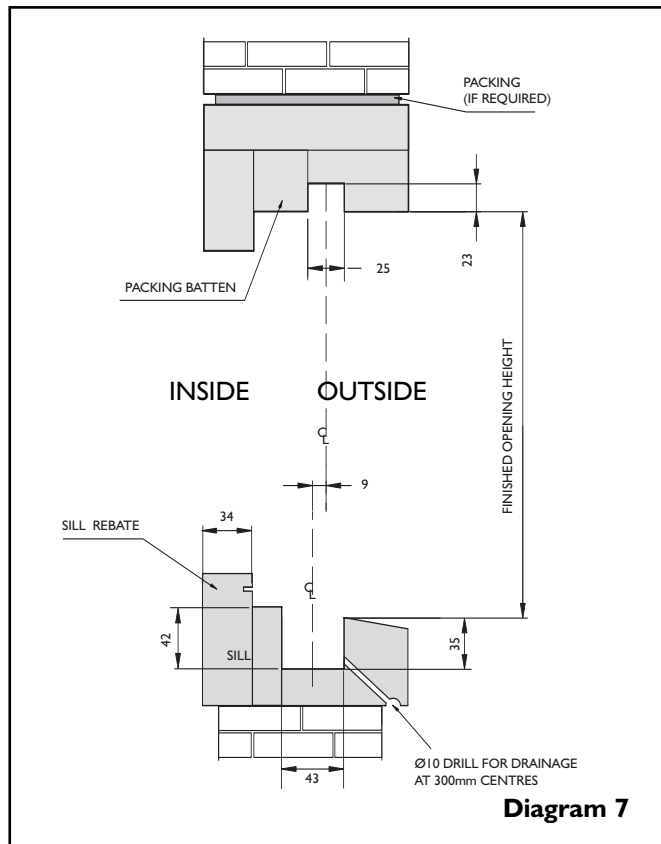

Diagram 6

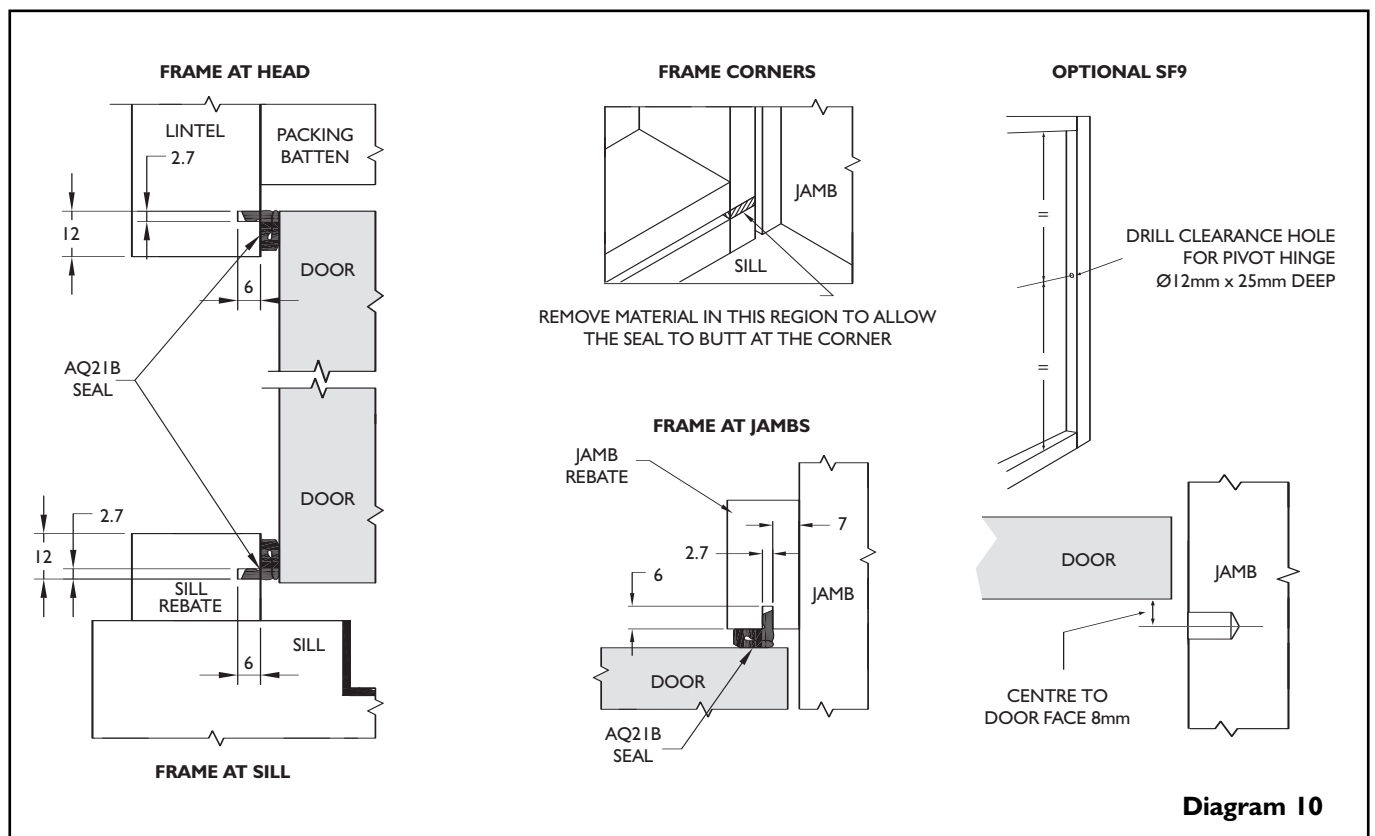

Preparing the opening

Ensure the opening is square and all load bearing areas are suitable for the weight of the system. Take particular care to ensure there is sufficient strength in the structure above the opening to take the concentrated weight of the door, when in the open stacked position. The SFBR system provides +/- 5mm horizontal adjustment. Use a plumb line to ensure the centre line of the top channel & bottom track are offset by 9mm

Preparing the door frame

Preparing the door leaves

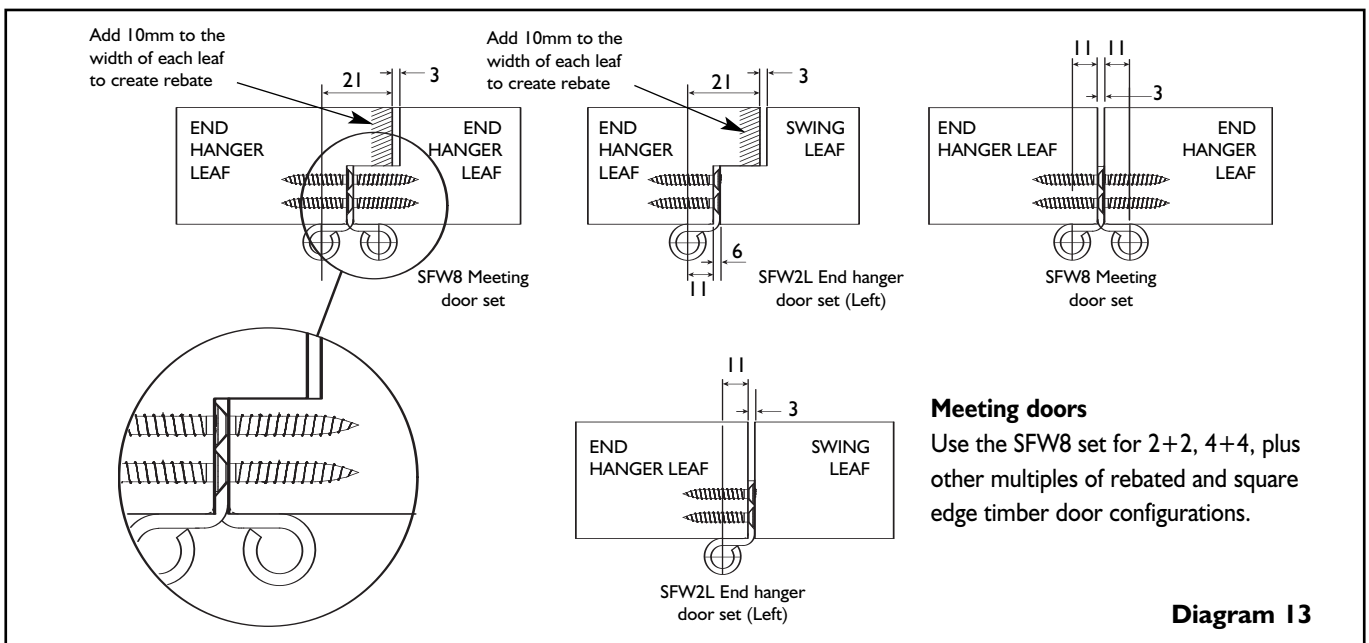

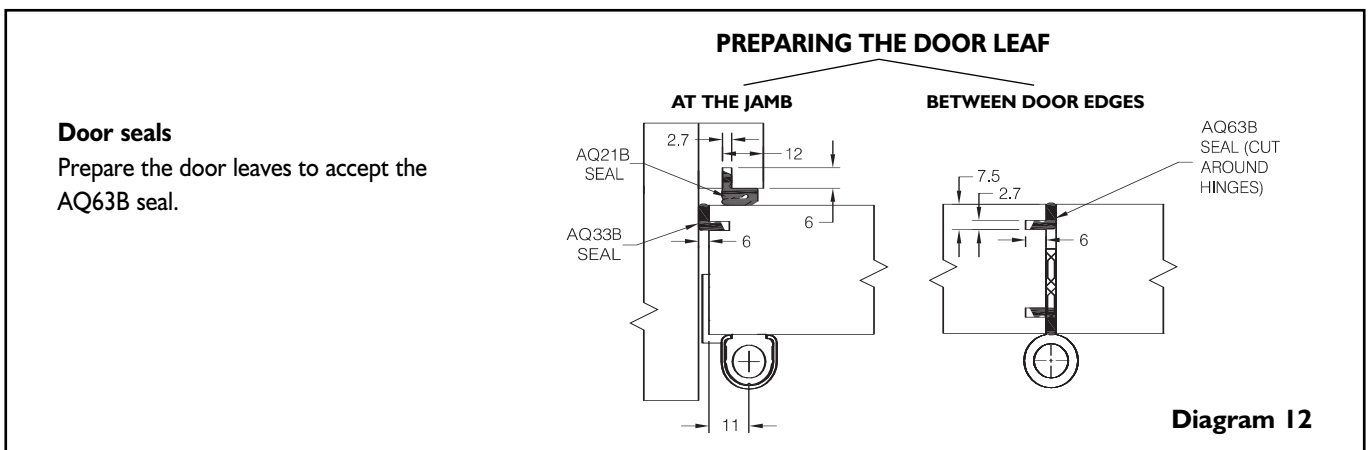

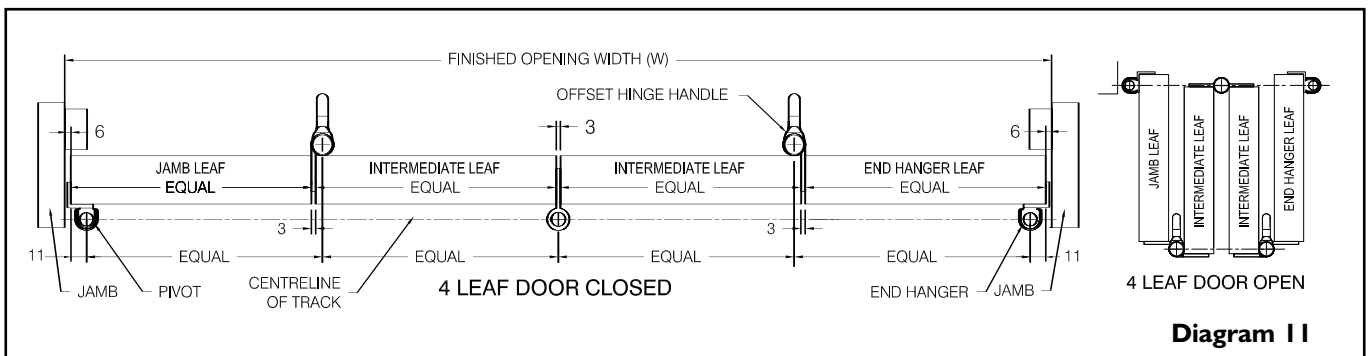

Door leaf width calculation

1. Decide how many door leaves you want in the opening.
2. Add together all the 3mm and 6mm clearances required between door leaves and the jambs (there will be one more than the number of door leaves). This is the total clearance figure.
3. Measure the finished opening width (W) and deduct from this the total clearance figure.
4. Divide this new figure (finished opening width minus total clearance) by the number of doors to produce the actual door width. (N.B. all doors with the SF Bottom Rolling system are the same width).

For example: For a 4 door leaf system with a finished opening width of 2345mm the door leaf width would be 2345mm minus (3x3mm) + (2x6mm) divided by 4 (number of door leaves) = 581mm.

Door leaf height calculation

Leaf height = finished opening height minus 20mm.

Meeting doors

Use the SFW8 set for 2+2, 4+4, plus other multiples of rebated and square edge timber door configurations.

End door leaf preparation

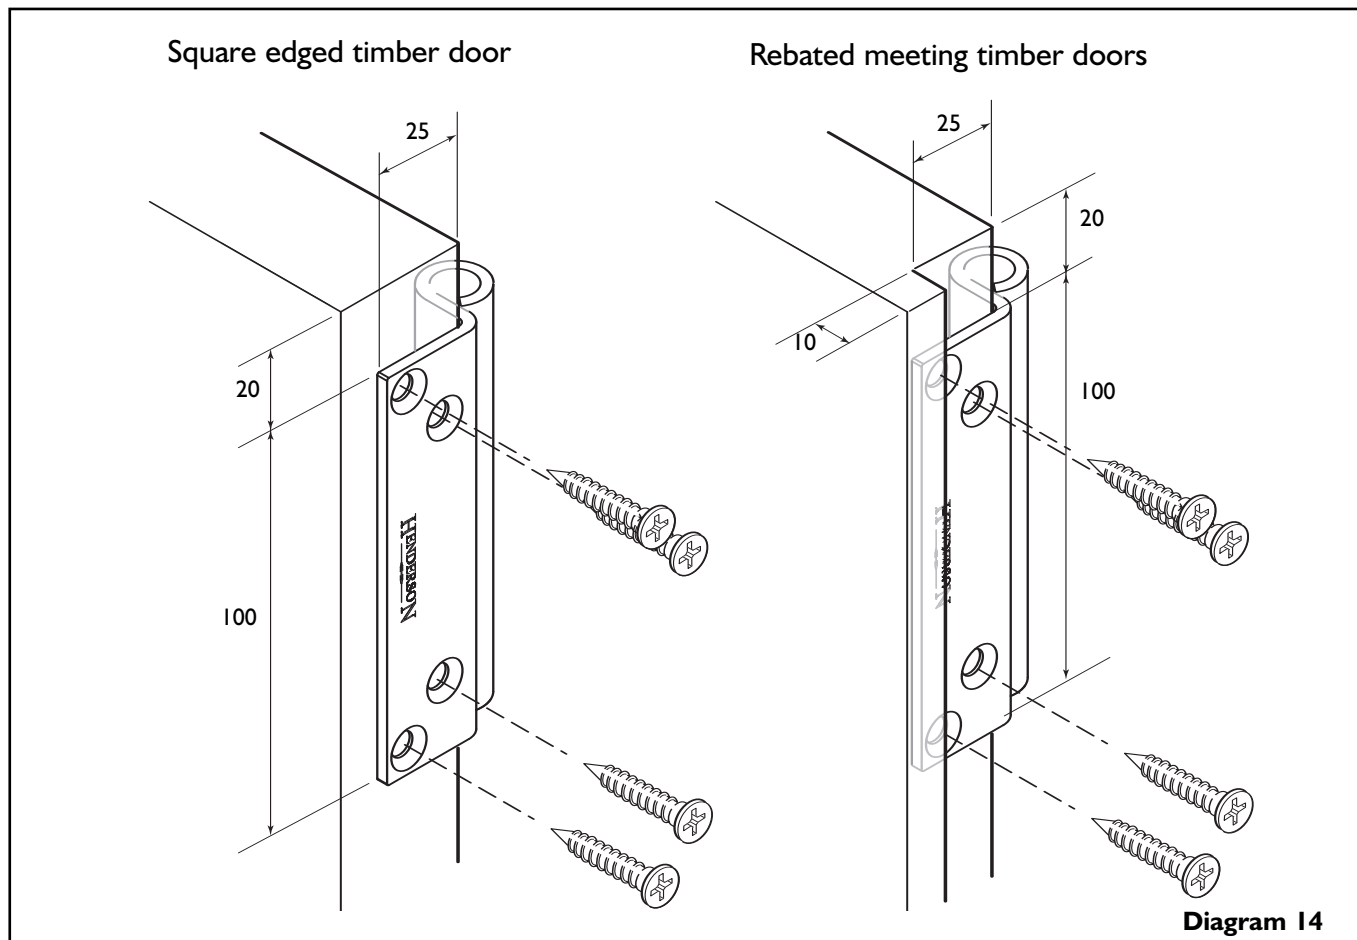

Diagram 14

Handing of the hardware

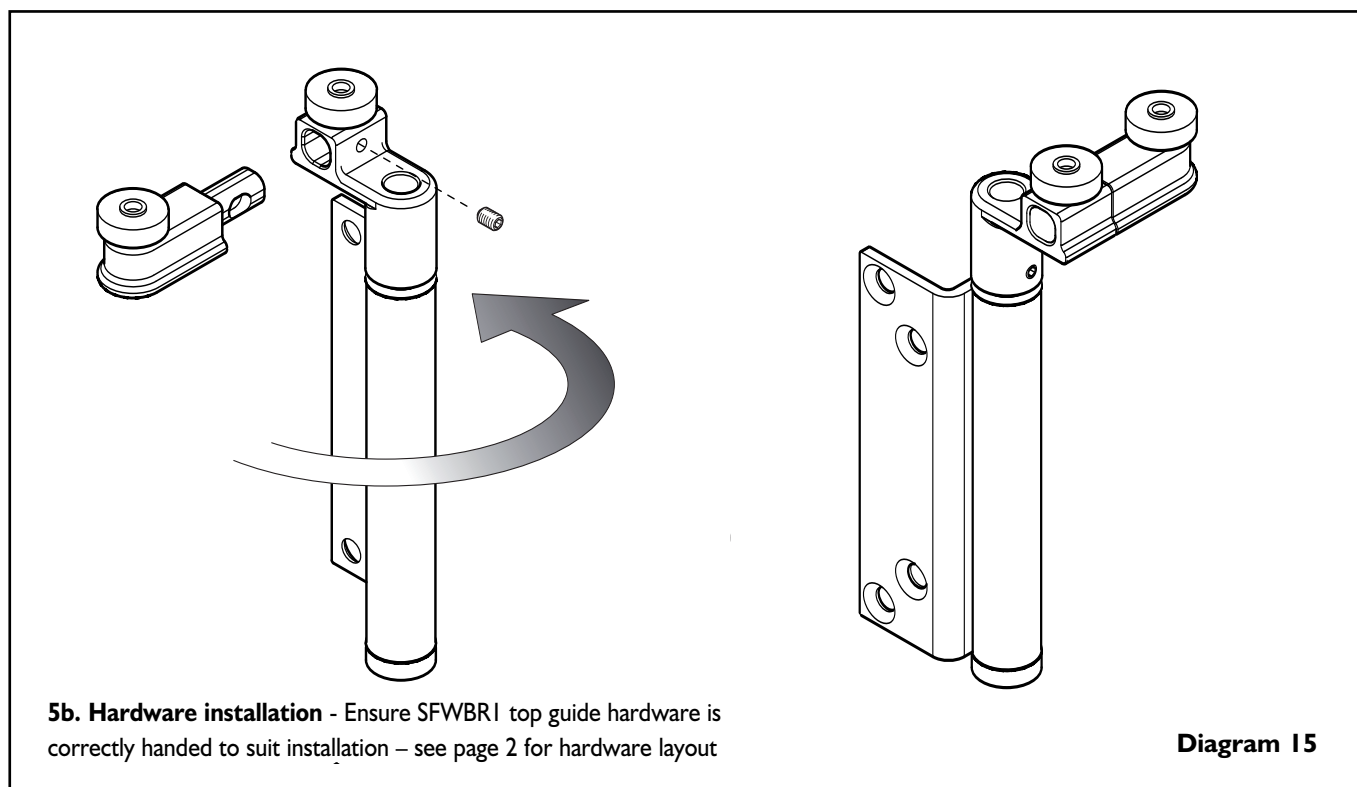

Diagram 15

6a. Ensure SFWBR2 bottom roller hardware is correctly handed to suit installation – see page 2 for hardware layout

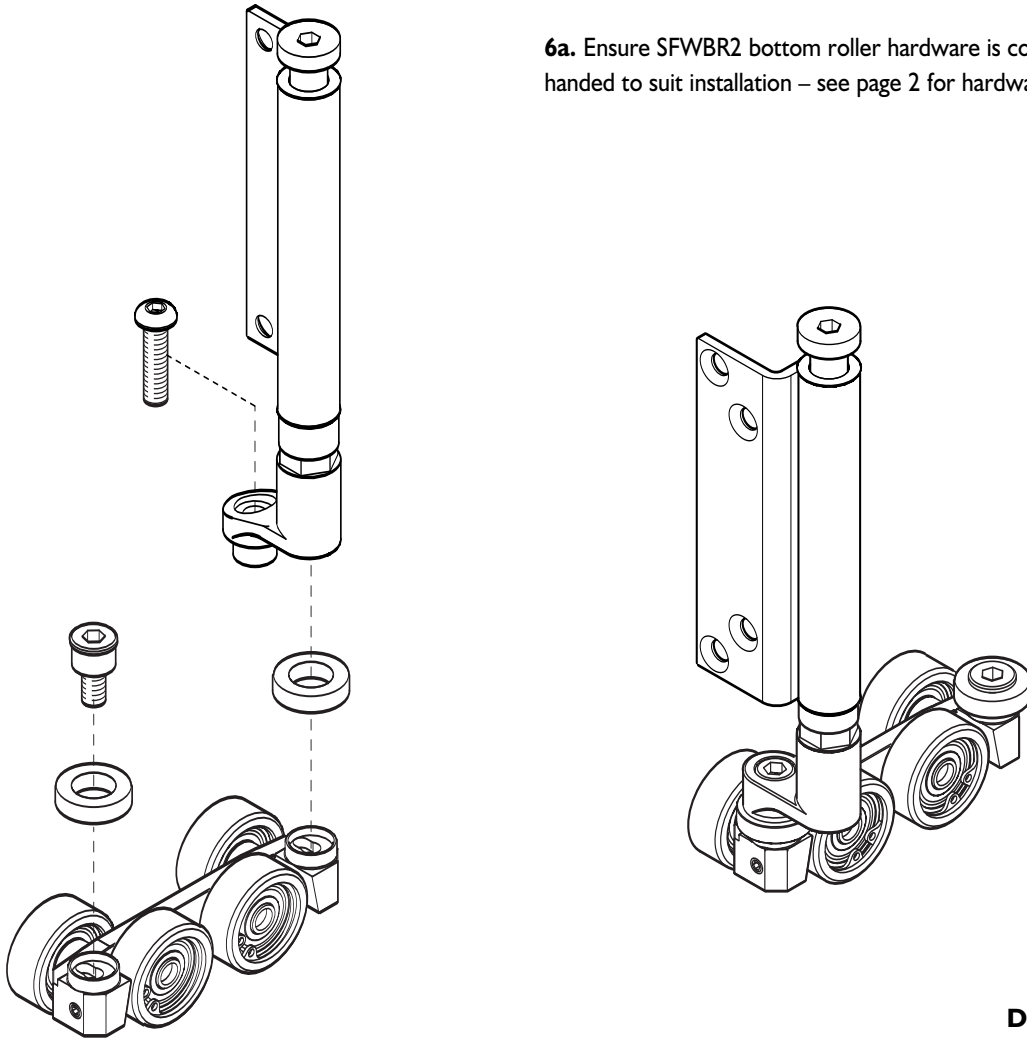

Diagram 16

Installation - Track and Guide Channel

6b. Cut bottom track to suit handing requirement – reduce length to suit opening. Cut out in track typically positioned directly under door stack in open

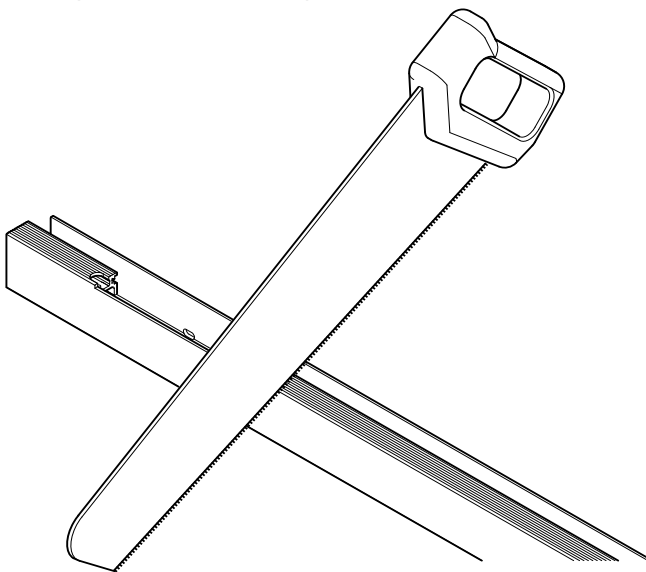

Diagram 17

6c. Install bottom track using screws included in kit (4 x 3/4" c'sink) or use suitable adhesive to secure to timber – Ensuring not to mark running surfaces of track. Drill drainage holes (see diagram 1)

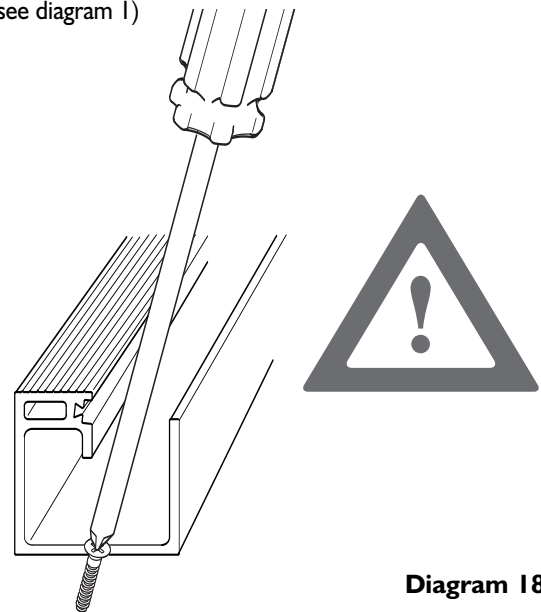

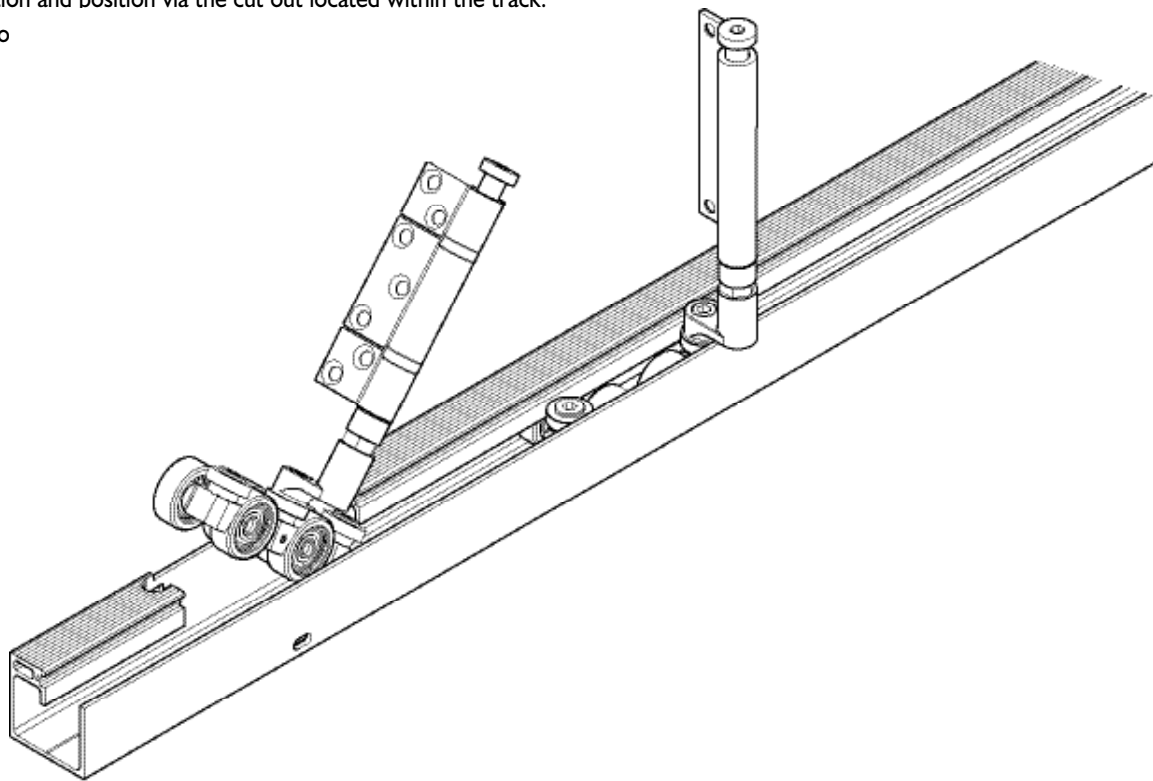

Diagram 18

6d. Cut & install top guide channel – fix through channel and polypropylene, ensuring not to obstruct the hardware.

Installation - Hardware into track

7a. Slide the bottom roller assemblies into the track in the correct order, orientation and position via the cut out located within the track.
(see layo

19

Pivot hardware into track

7b. Disassemble the bottom and top pivot assemblies, fix the anchor plates butted up against the jamb (zero gap), please note the screw hole furthest from the end of the anchor should be positioned closest to the jamb.

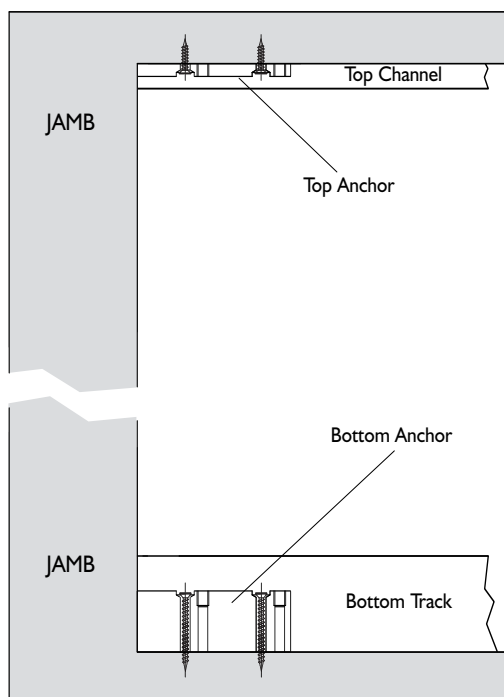

Diagram 20

7c. Reassemble the pivot assemblies in the correct orientation (see page 2 for layout details), leaving the clamp screw loose.

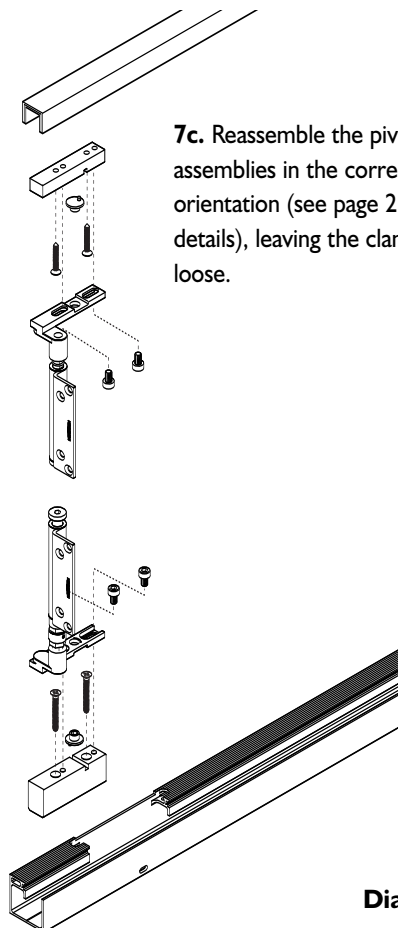

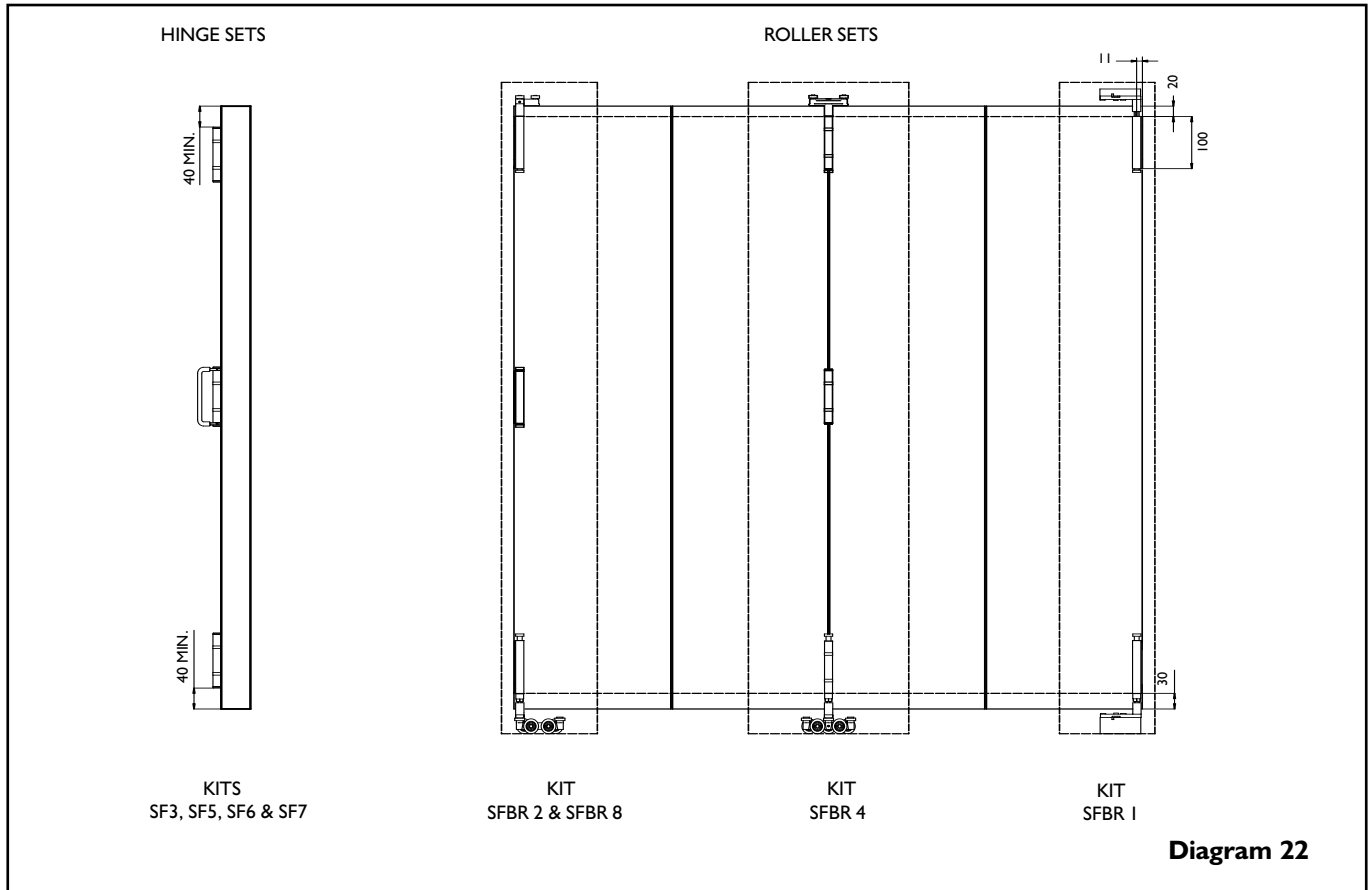

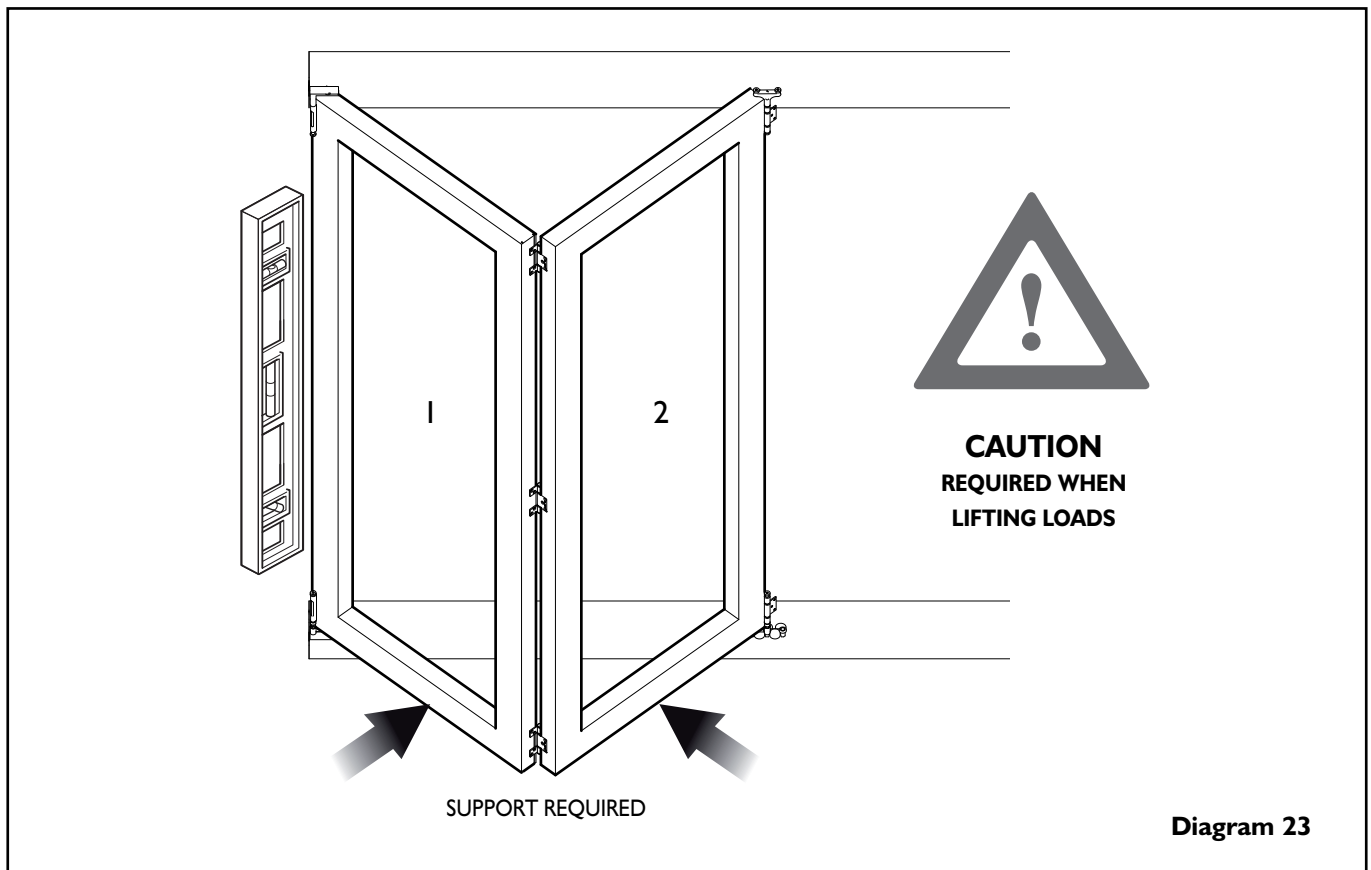

Diagram 21

8a. Installation of panels - assemble panels in pairs away from the frame, using appropriate hinge seams (typically SF3/ SF7) between panels. (see page 2 for hardware layout details) PCH recommend pre drilling pilot holes for all hinge hardware prior to installation into frame.

8b. Offer first pair of panels (1st and 2nd Panel) up to SFWBR 1 (pivot) and SFBR 4 (Intermediate) hardware using a spirit level to ensure the pivot panel is plumb to the jamb, using support under panels to maintain position.

9a. Installation of doors – Attach the 1st panel to the SFWBR 1 hardware using screws provided (diagram 24), and then attach the 2nd panel to SFBR 4 hardware using screws provided (diagram 25).

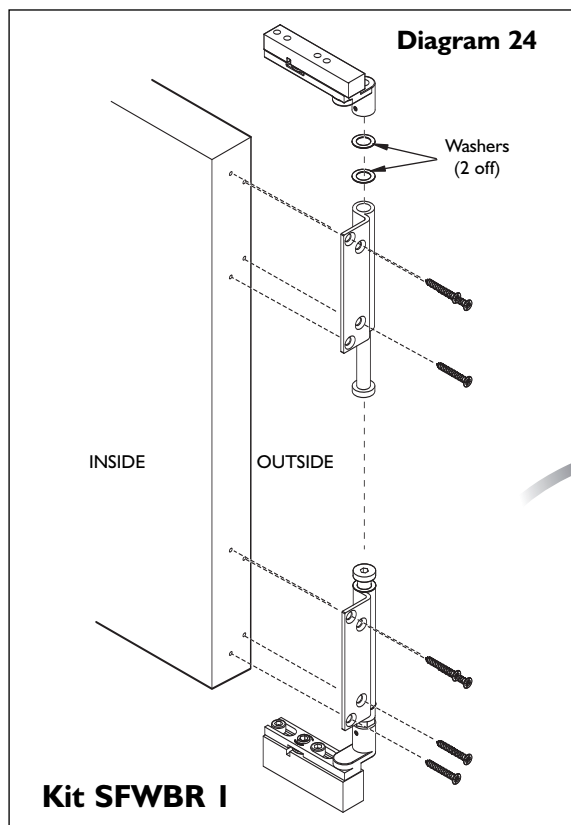

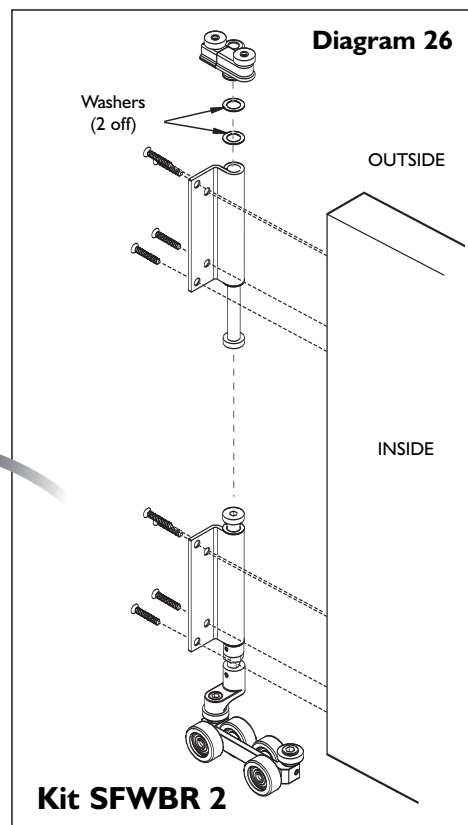

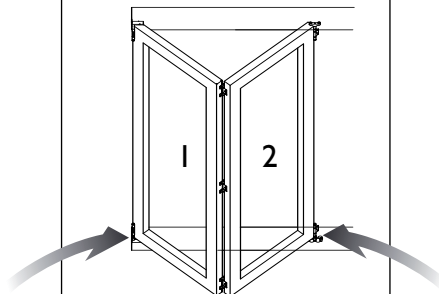

Diagram 25

9b. Offer second pair of panels (3rd and 4th panel) up to the SFBR 4 (intermediate) and SFWBR2 (end) hardware. Attach the 3rd panel to the SFBR 4 (intermediate) hardware using the screws provided, and then attach the 4th panel to the SFWBR 2 (end) hardware using the screws provided (diagram 28).

Diagram 27

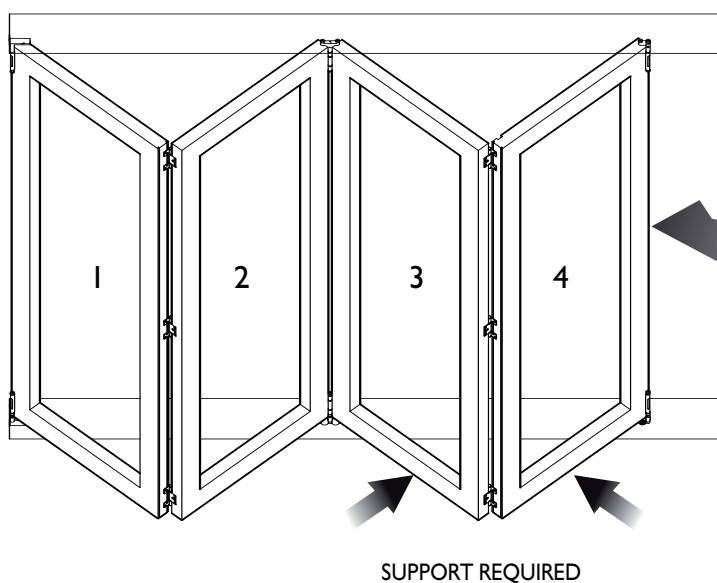

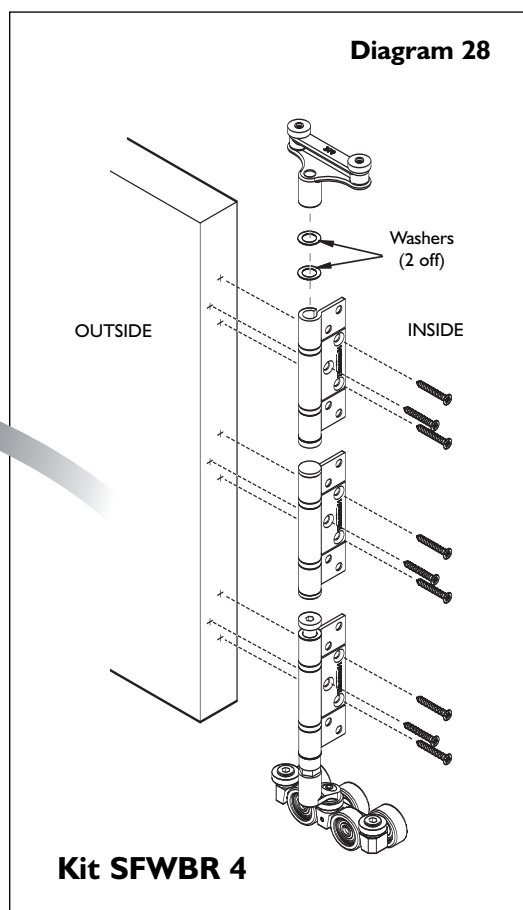

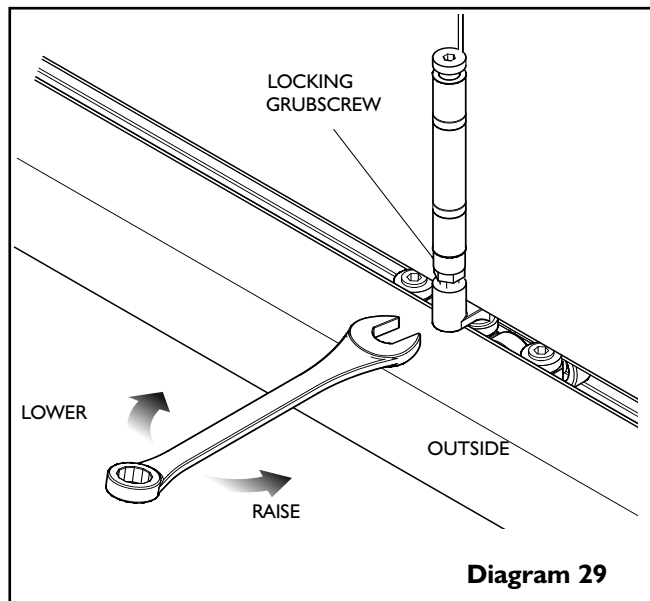

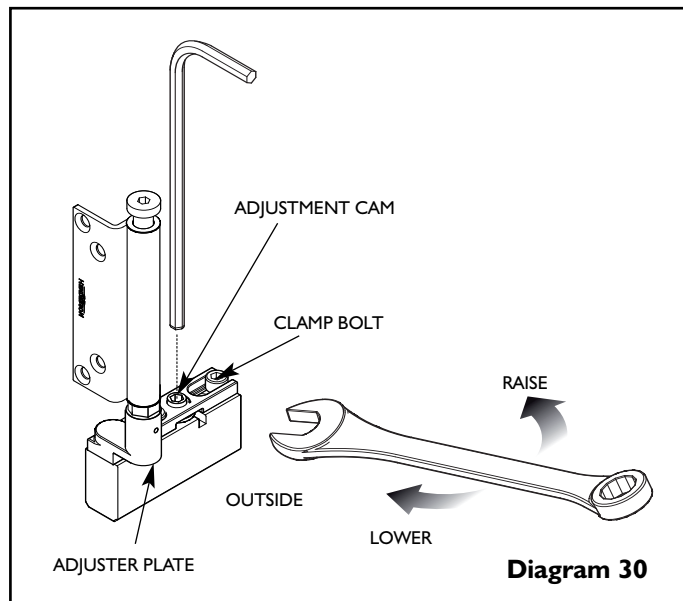

Diagram 28

ADJUSTMENT

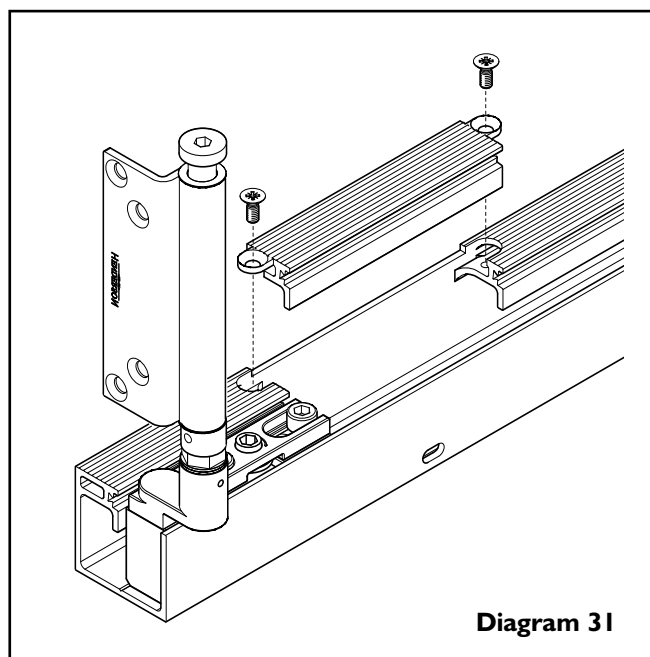

10a. Close panels and adjust the panel's height to achieve the clearance top & bottom stated in diagram 1 using the adjustment nut on each individual seam.

10b. To adjust the lateral position rotate the cam located in both top & bottom pivot assemblies. A gap of 6mm between the jamb and the pivot panel is recommended. Remember to tighten clamp screws once adjusted.

10c. Once final adjustments have been made ensure grub screws are secured in position using a propriety thread lock solution and tighten the screw until secure.

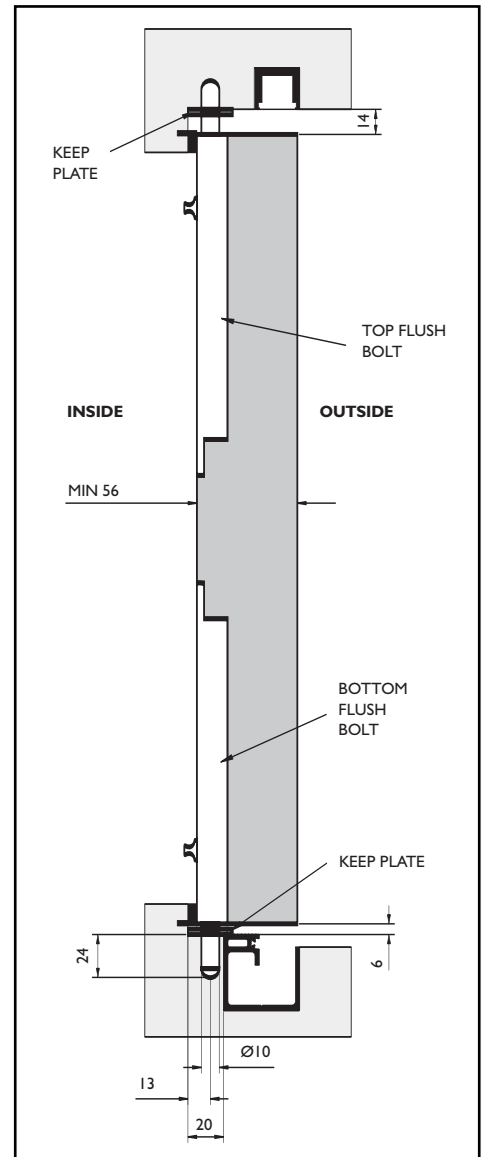

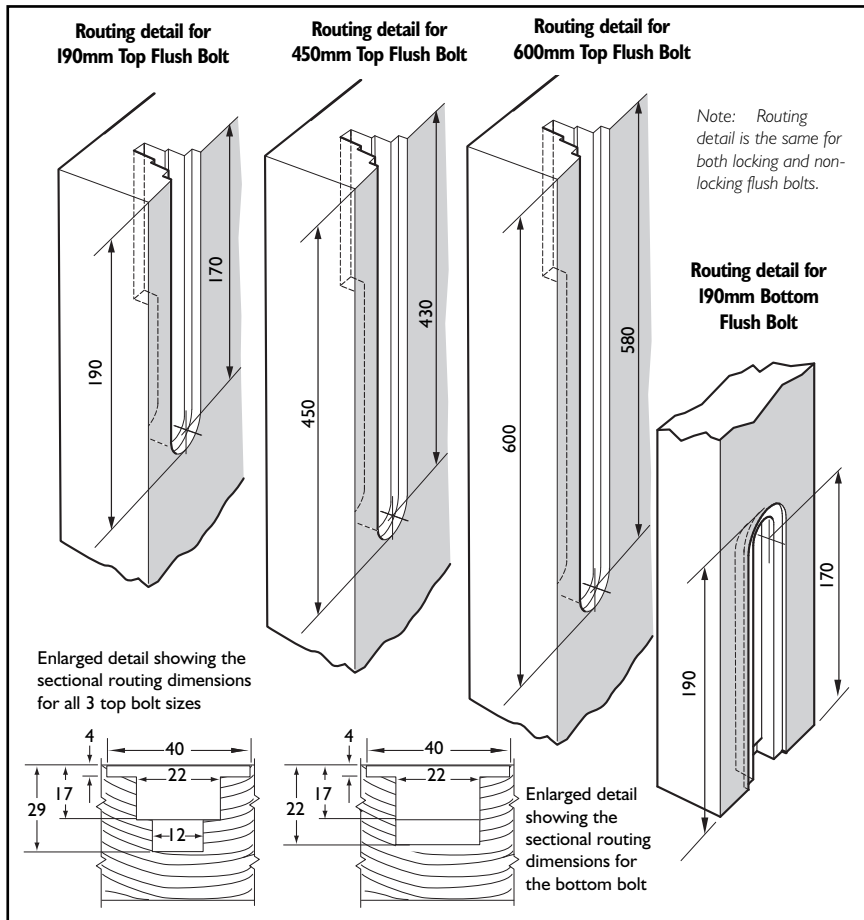

Finishing touches

Insert the brush strip from the open end, feeding the strip along the full length, trimming to suit. Reattach the cover plate

CARE AND MAINTENANCE

To provide years of trouble free operation, it is recommended that the track is kept free from dirt and debris. Periodically replace the general purpose grease on all bolts. To prolong the appearance of the exposed hinge parts, it is recommended they are periodically washed with soap and water. Maintenance is required on all components including stainless steel to validate manufacturers warranty. For further maintenance details please refer to our website, www.pchenderson.com.

For bottom rolling exterior folding doors. For use in conjunction with standard outward opening fitting instructions. Follow routing instructions for the bolt keep and flush bolt length to be fitted, fit both with the screws supplied. Suitable pilot holes for screws are recommended.

Door height	Recommended Bolt length for top of door	Recommended Bolt length for bottom of door
Upto 2200mm	190mm	190mm
Upto 2450mm	450mm	190mm
Over 2450mm	600mm	190mm
